

Bidirectional association between COVID-19 and the environment: a systematic review
 NR Rahimi, R Fouladi-Fard, R Aali, A Shahryari... - Environmental ..., 2021 - Elsevier
 The global crisis caused by SARS-CoV-2 (COVID-19) affected economics, social affairs, and the environment, not to mention public health. It is estimated that near 82% of the SARS-CoV-2 genome is similar to the severe acute respiratory syndrome. The purpose of the review is ...

 COVID-19 Epidemic compartments model and Bangladesh
 MS Islam, JI Ira, KMA Kabir, M Kamrujjaman - Preprint, DOI, 2020 - researchgate.net
 In the promptness of the COVID-19 outbreak, it would be very important to observe and estimate the pattern of diseases to reduce the contagious infection. To study this effect, we developed a COVID-19 epidemic model that incorporates five various groups of individuals ...

 An epidemiological model with voluntary quarantine strategies governed by evolutionary game dynamics
 MA Amaral, MM de Oliveira, MA Javarone - Chaos, Solitons & Fractals, 2021 - Elsevier
 During pandemic events, strategies such as social distancing can be fundamental to reduce simultaneous infections and mitigate the disease spreading, which is very relevant to the risk of a healthcare system collapse. Although these strategies can be recommended, or even ...
